

**METHOD AND APPARATUS FOR CAPTURE VERIFICATION  
AND THRESHOLD DETERMINATION**

5

Abstract

10 An apparatus and method for verifying capture by a pacing pulse in which a test depolarization waveform recorded during a pacing event is compared with a template waveform representing capture by the pacing pulse. Capture verification in this manner may be used in pacemakers having multiple pacing channels for the atrial and/or ventricles where the multiple paces can interfere with conventional sensing of evoked responses in order to verify capture.
